

AI DISCLOSURE FORM

Use of Generative Artificial Intelligence Tools for the Final Project

This form must be submitted together with the project. Failure to provide this form, or providing incorrect or incomplete information, is considered a breach of academic integrity rules and will be treated according to the university's regulations.

1. Identification details

Full name (Student/Team members)	Boțan Mihai
Student ID / Group / Year / Programme	PSCL04/Group 1/Year 1/Psychology - Cognitive Sciences
Institutional email address	mihail.botan00@e-uvt.ro
Course	Introduction to Programming
Project title	Habit Tracker in Python
Submission date	24.01.2026

2. AI tools used

List each tool you used. If you did not use AI, write "NO AI USED" in the first row and sign the declaration.

Tool (name) + model/version (if known)	Provider	Access (web/app/API)	Approx. dates	Link (optional)
ChatGPT		Web		

Add rows as needed.

3. How AI was used (tick all that apply)

- ☐ Brainstorming / project planning (ideas, architecture, algorithms).
- ☐ Concept explanations / clarifying theory (syntax, libraries, complexity).
- ☐ Generating code snippets (functions, scripts).

- ☐ Debugging (identifying errors, interpreting tracebacks, proposing fixes).
- ☐ Refactoring / optimization / style (typing, reorganizing files).
- ☐ Generating tests (unit/integration), test cases, test data.
- ☐ Documentation (comments).
- ☐ Other (describe): _____

4. Detailed record (mandatory)

For each relevant use, complete one row in the table below. The purpose is traceability: what you asked, what you received, what you kept, and where it appears in the project.

No.	Task / problem	Prompt (summary) / AI input	AI response (summary) / generated output	What you integrated & how you validated/modified (tests, reasoning, sources)
1.	Unit Testing	I have requested an AI's input while making the unit testing part of my project.	It has shown me a random code about how to successfully make some unit testing, from which I have taken some information and changed it accordingly to my main code.	I have implemented AI's input into my last 4-5lines of code in the test.py file, since I did not understand how I should actually make the execution of the testing itself.
2.	Working out the code for it to compute 5 separate total scores for each category of questions	I have asked an AI tool to explain how I should make 5 different computed total scores instead of one for the whole set of questions.	I gave the AI my previous lines of code, to which it has shown me how to make it give me 5 different total scores.	I did not use the precise codes the AI has given me, whilst I have still maintained the somewhat similar structure of what it had generated. The last lines of my code, where the program is supposed to compute the total scores is where AI input has been integrated.

Add rows as needed. If you used AI extensively, you may attach a separate log (PDF/TXT) and reference it here.

5. Declaration

By signing, I declare that:

- The information provided in this form is complete and accurate.
- I critically reviewed any AI suggestions/outputs (correctness, security, licensing, compatibility, quality).
- I take full responsibility for the project content.
- I understand that omitting this form or providing incorrect/incomplete information may be treated as an academic integrity violation under university regulations.

6. Signature

Full name(s)	Boțan Mihai
Signature	
Date	24.01.2026
